Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-8 and 13-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Takeshima et al.'672.

Takeshima et al.'672 teach all the elements of the current invention including an apparatus having a yoke with plates for guiding magnetic fluxes through a closed loop wherein superconducting coils are surrounded by iron in order to reduce the leakage of magnetic fields (col. 14, lines 55-67, col.'s 15-16 and also see col. 26, lines 66-67 and col. 27, lines 1-15).

Takeshima et al.'672 provide the teaching that magnetic shields can be divided into a number of parts as an easier way to carry and assemble (see col. 6, lines 13-30).

It would have been obvious to one skilled in the art at the time that the invention was made to have modified Takeshima et al.'672 so that the plates have a plurality of parts or segments as an easier way to carry and assemble, as is well known to do with magnetic shields. In other words, it would have been obvious to one skilled in the art at the time that the invention was made to have made the plates out of a plurality of segments for easier assembly as is known to do with magnetic shields.
